(54) Title: ADJUSTABLE MODULAR SUPPORT FOR MODULAR STAIRCASES

(57) Abstract: The invention relates to an adjustable modular support for modular staircases of the type in which the tread plane of the stair is set and fastened on one or more coplanar flat portions defining a plane perpendicular to the axes of two staggered, parallel cylindrical sleeves of a suitable diameter for the successive couplings along vertical pivot axes, at which the rises and the progression of the flights are to be defined. The modular support is made up of to elements (A, B) connected to one another so as to allow upon installation, the manual adjustment of the distance between the centres of the aforementioned two sleeves (A1, B1) according to the selected tread.
